AXP365 Automated Testing™

Automated testing is invaluable for Life Science companies to ensure the continued reliability of GxP-critical software products through their lifecycle. Evidence that the software is behaving as expected is mandatory. Implications of unexpected behaviors can be critical for the quality of a product and, more importantly, patient safety. Relying on test automation allows Companies to reduce human errors and periodically challenge the system to ensure its compliance with the expected behavior.
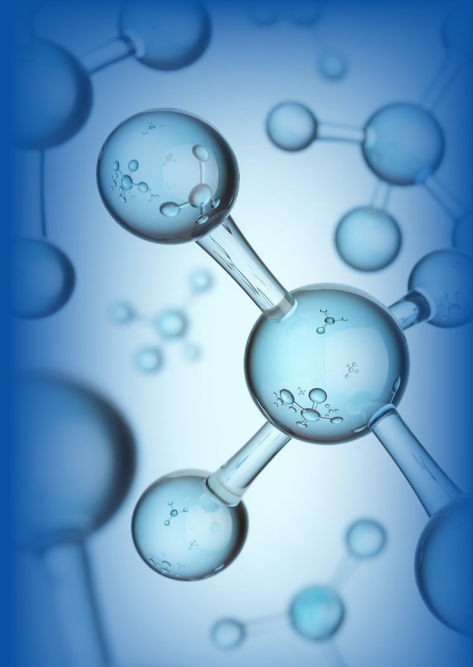

Extensive Control on the continuous compliance of the solution to ensure the highest care for patient safety.

Continuous cloud updates and changes require system retesting activities, which are usually time-consuming and expensive. AXP365 Automated Testing™ has been specifically designed to support the continuous validation and includes a library of validated test scripts, ensuring the COTS solution fulfills the required compliance.

AXP365 Automated Testing™ can automatically execute Test Scripts and generate documentation based on custom templates.

AXP365 Automated Testing™ is fast to learn and easy to maintain, thanks to its script recording functionality and its intuitive interface.

AXP365 Automated Testing™ will reduce the burden associated with the system testing and provides full traceability of test runs, audit trails and electronic signature.

DESIGNED FOR THE PHARMACEUTICAL AND LIFE SCIENCES INDUSTRIES

Comprehensive Support to Change Management and Security testing

Fully integrated with Azure DevOps

Audit trails and Electronic signature

KEY BENEFITS

Flexible and Scalable

Speed up testing, and build reusable, ready-to-use scripts. Do not waste precious time by recording the same process over and over. AXP365 Automated Testing™ allows you to record the process once and then leverage it by copying, nesting, and embedding it as part of multiple tests. Leverage the compliant scripts you have already created in your ever-expanding script library. The bigger the script library, the quicker creating new scripts becomes; you need only focus on the critical processes and steps your library lacks.

Engineered for Life Sciences

Tags, version control, Audit trails, electronic signature, screenshots, and reports are only a fraction of what the AXP365 Automated Testing™ can offer to ensure the continuous compliance and the quality of the generated documentation. Security measures are available to ensure the segregation of duties and responsibilities.

Integrated with Azure DevOps

Fully configure the degree of integration with Azure DevOps. AXP365 Automated Testing™ allows to create Projects and Scripts, allows to store Test Runs and their results, and seamlessly switch to Azure DevOps. Define rules based on Test Runs outcomes to automatically create bugs and tasks on Azure DevOps, including all the script details, the step, and even screenshots of the system.

Continuous validation

Ensure the continuous compliance of your solution throughout the software lifecycle. With just a click, it is possible to lunch the execution of the Test library, or a set of scripts, to ensure that version updates, customizations, enhancements, or changes in configurations have not impacted the solution in unexpected ways or to periodically challenge the system to ensure its continuous correct behavior.

Fast to learn

Enjoy a code-free experience by using the intuitive interface of the AXP365 Automated Testing™. Any user can experience the full broad of the tool functionality without ever seeing a line of code. Loops, field validation, values comparison, conditional steps, and many other functions are as simple as they can get to enable everyone to create even the most complex scenarios.

DESIGNED FOR THE PHARMACEUTICAL AND LIFE SCIENCES INDUSTRIES

Full Traceability of Test Cases and Test Runs

Performance Testing and Security Testing

Document results with screenshots and reports

Iterate tests using different data sets

Full Traceability of Test Cases and Test Runs

Simulation of Real-Life Situations supported

Reliability of test results

Intuitive Test recording interface

Full Integration with Azure DevOps
